Navigate, Collaborate, Innovate

NCI is a leading provider of enterprise solutions and services to U.S. defense, intelligence, health and civilian government agencies. The company has the expertise and proven track record to solve its customers’ most important and complex mission challenges through technology and innovation.

With core competencies in delivering cost-effective solutions and services in areas such as:

- Agile digital transformation
- Advanced analytics
- Artificial intelligence
- Cybersecurity and information assurance
- Engineering and logistics
- Fraud, waste and abuse detection
- Hyperconverged infrastructure

Coupled with a refined focus on strategic partnerships, NCI is committed to bringing commercial innovation to missions of national importance.

Quick Facts

- Founded: 1989
- Workforce: ~2,000
- Employees with security clearances: 62%

IT Infrastructure Optimization and Service Management
NCI delivers enterprise-class, bare-metal virtualization solutions focused on procuring capacity services and Enterprise as a Service (EaaS) requirements in a fiscally-strained environment. Our unique, tailored methodology for delivering IT service management is based on defining needs rather than simply implementing industry best practices.

Big Data and Data Analytics
As a leader in mission-oriented intelligence-to-operations initiatives that reduce time and turn data into actionable information, NCI focuses on delivering innovative technologies to solve our customers’ complex challenges. We have significantly enriched the intelligence-to-operations lifecycle by applying scalable technologies and advanced algorithms to help interpret data.

Cybersecurity and Information Assurance
Our comprehensive approach aligns information assurance and cybersecurity initiatives that support business objectives, compliance requirements and risk management. We provide our federal government customers full lifecycle of cybersecurity services and are actively engaged in ensuring their networks are properly secured.

Agile Development and Lean Software O&M
NCI develops applications and modernizes systems using proprietary Agile methodology. We provision and scale data for high performance, processing and analytics, data strategy and analysis, and at-scale data/software engineering automation. And, we bring efficiency and visibility to application Operations and Maintenance (O&M) using our CK method and teams. Our approach has proven to increase break-fix throughput and reduce lead time and support costs.

Engineering and Logistics
NCI delivers innovative engineering and logistics solutions enabling affordability, effectiveness and mission readiness anywhere in the world. Our solutions ensure the customer the lowest cost for the best performance anywhere, any time.

Health and Program Integrity
Our health IT solutions enable efficient information sharing, reduce paperwork collection and control efforts, and improve healthcare quality for our government customers. And, we help U.S. federal agencies reduce improper payments by fighting fraud, waste and abuse in entitlement programs.

Artificial Intelligence
NCI is exploring opportunities to improve the efficiency of its current operations, providing true interoperability and collaboration between customers, employees and AI systems. NCI’s AI capabilities focuses on scaling humans, an AI approach that uses continual machine learning and automated processes to build greater workforce efficiencies and organizational results. Our AI deployment strategy focuses on achieving the right balance between humans and automation to optimize an outcome — or in other words, scaling humans through AI (Shai™).
